WORKSHOP

INTERNET OF THINGS

FOR

SMART CITIES & COMMUNITIES

BILBAO, SPAIN, 6-7 JUNE 2018

WORKSHOP ON INTERNET OF THINGS FOR SMART CITIES & COMMUNITIES

The adoption of Internet of Things (IoT) in various smart city ventures across the globe has propelled the idea of exploiting information and communication technologies (ICTs) to support urban services. With the goal to improve the quality of life of citizens, various stakeholders in cities are building alliances and initiating projects with public and private entities to explore new technologies. In this scenario, there is a need to manage and integrate different types of knowledge to efficiently and effectively support the exploration and exploitation of IoT.

Smart cities are about to bring positive social change. Driver of this change are IoT-based services for citizens and the adoption of IoT-enriched governance and human capital among the citizenry. But certain gaps still exist in the planning, execution and interoperability of IoT-based services. In this context, several international initiatives and organizations pool together their knowledge and discuss the potential of converging towards open and interoperable solutions for smart cities.

THE WORKSHOP WILL:

- Explore the role of IoT in existing smart city initiatives
- Showcase successful international initiatives in the IoT and smart city domain
- Present feasible frameworks for IoT-enabled smart cities
- Discuss the proposition of Open API and interoperability in smart cities
- Examine personal data protection in smart cities
- Develop and coordinate a standardization strategy for IoT and smart cities
- Reflect on the role of smart cities in win-win joining and sharing among related research, innovation and deployment initiatives.

The workshop takes place during

IoT Week and Global IoT Summit

June 4-8, 2018
Bilbao, Spain
